

Comm to Reps

APOLLO Essentials — Image Web Server 2011,
Version 11.0.2

Executive Summary

ERDAS APOLLO Essentials - Image Web Server (IWS) efficiently delivers massive amounts of image data quickly and efficiently to thousands of concurrent users.

The product is purpose-built, faster and more cost-effective than other image serving technologies on the market. The 11.0.2 release is a cumulative customer bug fix release. The release is distributed as a full installation and does not require a previous IWS 2011 version to be installed.

Product Summary

ERDAS APOLLO Essentials – Image Web Server 2011, version 11.0.2 contains over 40 customer product fixes or enhancements. Highlights include:

- Support for new projection systems, including HK80, Amersfoot, ESRI Web Mercator Auxillary Sphere and Vicgrid94
- Improved logic to better handle unloading multiple files in quick succession, that previously caused server instability
- Enhanced advanced security communication to support HTTPS/SSL
- Custom WMS services will now inherit the security settings of the default service
- Improved ECW Opacity Builder utility to better handle error events
- Numerous performance and stability issues have been resolved in the ECW Browser Plugin, including improved support for Google Chrome
- Improvements to image accuracy and quality for non-ECW and JPEG2000 datasets
- Max image output size has been increased from 10,000px to 15,000px to

adequately cater for ISO A0 plot sizes at 300 DPI

- Bug fixes to the WMTS interface to comply with the OGC TEAM engine test suite
